PROFESSIONAL SUMMARY

Computer Science graduate who builds full-stack web and mobile applications. Experienced in REST APIs with Node.js, Express.js and MySQL, Next.js and TypeScript front ends, and Flutter apps with Firebase. Built a multi-stage permit-to-work workflow during an internship and built freelance web and mobile projects with an emphasis on server-side validation, role-based access and reliable data handling.

EDUCATION

Bachelor of Computer Science (Hons.) Multimedia Computing
Universiti Teknologi MARA (UiTM) | 2024 – 2026

Diploma in Computer Science
Universiti Teknologi MARA (UiTM) | 2021 – 2024

WORK EXPERIENCE

Software Engineer Intern | UpTime Pro Engineering Sdn.Bhd | March 2026 – July 2026
Tools: Node.js, Express.js, JavaScript, MySQL, GitHub, XAMPP, Visual Studio Code, Figma, Draw.io

- Developed a web-based Permit-to-Work management system covering permit submission, approval workflows and workplace safety processes.
- Designed a server-side status workflow that validates each permit transition and logs every change with actor, role, timestamp and comment
- Built a two-stage HSE review (MOS approval, then permit approval) with competency checks per work type.
- Developed backend functionality and REST API endpoints for permit tracking, user management and workflow validation.
- Designed database structures and user interfaces to support permit submission, approval tracking and safety management.

Website Developer Intern | ICC, UTHM | September 2023 – February 2024
Tools: PHP, MySQL, HTML, CSS, JavaScript, Bootstrap

- Developed a PHP/MySQL-based intellectual property management system for storing, retrieving and managing university IP records.
- Implemented database-driven CRUD functionality and responsive interfaces for staff and administrators.
- Integrated application logic with MySQL operations for record management workflows.
- Performed functional testing, debugging and data validation to improve system reliability.

CERTIFICATION

Programming with JavaScript | Meta | 2026
Introduction to Front-End Development | Meta | 2026
Google AI | Google | 2026

Python Programming Fundamentals | Top Coders Malaysia | 2025

SKILLS

Programming Language: JavaScript, TypeScript, Dart, PHP, Python, Java, C#, C++
Frontend and Mobile: React, Next.js, Flutter, Tailwind CSS, HTML5, CSS3
Backend and Databases: Node.js, Express.js, REST APIs, MySQL, Firebase, Supabase
Tools and Services: Git**,** GitHub, Vercel, Hostinger, Gemini API, Resend, XAMPP, Draw.io, Figma, WordPress
Methodologies: Agile, Software Development Life Cycle (SDLC), use case and requirements analysis
Additional Skills: SEO Optimization, Web Performance Optimization, Database Design, UI/UX Design

PROJECTS

Permit to Work System | HTML, CSS, JavaScript, Node.js, Express.js, MySQL, REST API, GitHub, XAMPP | 2026

- Designed a server-side permit state machine that validates every status transition and logs each change to an audit trail with actor, role, timestamp and comment, so no permit can skip a stage.
- Built a two-stage HSE review (MOS approval, then permit approval) with per-work-type competency checks, so permits are evaluated against the competencies their work type requires.
- Designed REST APIs for user management, permit tracking and workflow validation on Express.js and MySQL, with role-based access control enforced on requester and approver endpoints.

Morakniv Food Industry Malaysia Website | Next.js, React, TypeScript, Tailwind CSS, Supabase, Resend | 2026

- Built a searchable product catalogue covering 45 models and 99 article numbers across 6 categories, with filters for colour, stiffness and NSF approval, plus exact article-number lookup that takes buyers straight to the matching model and handle colour.
- Implemented enquiry forms with server-side Zod validation that re-checks every submission, Resend email delivery with acknowledgement and notification emails, and layered spam protection (rate limiting, honeypot field and submission timing check).
- Built a Supabase-backed dealer directory with Row Level Security, public read access and write access limited to authenticated accounts, behind a protected admin login.

NutriScan – AI Nutrition Tracking App | Flutter, Dart, Firebase, Cloud Functions, TypeScript, Gemini API | 2026

- Designed a secure AI food-analysis pipeline where the Flutter app calls a Firebase callable Cloud Function that checks the caller, validates the request and calls Gemini, keeping the API key in Google Secret Manager so it never ships inside the client app.
- Built a photo-based meal logging flow where users review and correct AI nutrition estimates before saving to Firestore, with error handling for rate-limited and unavailable AI responses.
- Built personalised daily calorie and macro targets using the Mifflin-St Jeor equation, a meal dashboard, and date-based history with editing and deletion, backed by Firebase Authentication and Cloud Firestore.

LEADERSHIP & ACTIVITIES

- AJK Logistic & Technical – Program SULAM : PROJECT E-ADAB: Digital Ethics For Youth (2026)
- Volunteer – Soopa Dopa UiTM Jasin (2025)
- Multimedia Support Intern – Research Innovation Symposium Exhibition (2023)
- SULAM Community Service Program – UiTM Segamat (2023)

HONOURS & ACHIEVEMENTS

- Dean's List – Semester 2 (2022)
- Dean's List – Semester 4 (2023)
